

# Egypt Area Regional Study

**Data used:**

- Surface geology
- DEM/topography
- Seismic/well tops
- Gravity
- Magnetics

**Interpretive layers:**

- SEEBASE™ - depth to basement imaging
- Structural models – basement-involved
- Basin architecture – including new sub-basins and basins
- Tectonic events and responses
- Composition, lithology and structural fabric of terranes
- Basement terranes

**Products include:**

- A1 Atlas - Geology coverages
- A3 Atlas - Metadata
- A3 Atlas - Basins
- GIS Arcview Project with all coverages
- Grids of geological output

Where do you want to look?

## EARS - The Egypt Area Regional Study

A new view of the sedimentary basins of Egypt based on the systematic calibration, integration and interpretation of non-seismic and seismic data across the whole of onshore Egypt, including the Gulf of Suez.

Originally sponsored by Apache Egypt, BP Egypt, IEOC, Repsol and Shell Egypt.

EARS provides a base for developing new exploration and acquisition strategies at the concession scale.

EARS tools are applicable at the concession scale and can dramatically improve exploration efficiency and effectiveness.

Provides a consistent base for volumetric assessment.

**Price : US\$ 125,000**
